Ce guide a pour objectif de vous accompagner pas à pas dans la compréhension et la gestion de votre connexion Internet sur Windows 10. Que vous ayez une connexion Wi-Fi ou Ethernet, que vous rencontriez des difficultés ou que vous souhaitiez simplement optimiser votre expérience de navigation, vous trouverez ici des conseils simples et précis pour devenir autonome.

Comprendre la configuration de votre connexion Internet sur Windows 10

Quelles sont les différentes options de connexion ?

Windows 10 supporte plusieurs types de connexions Internet :

- Wi-Fi (sans fil) : la méthode la plus courante pour se connecter à Internet à la maison, dans les cafés, hôtels, etc.
- Ethernet (filaire) : connexion via un câble réseau, souvent plus stable et rapide.
- Mobile (4G/5G) : via un modem ou une clé 4G/5G si vous utilisez un forfait mobile.
- Hotspot portable : partage de connexion depuis un smartphone ou un appareil dédié.

Vérifier si votre ordinateur est connecté à Internet

Pour vérifier rapidement votre état de connexion, regardez l'icône réseau dans la barre des tâches (en bas à droite). Si elle affiche une icône Wi-Fi ou Ethernet avec un symbole de connexion, vous êtes connecté. Sinon, l'icône peut indiquer un problème ou un mode avion activé.

Configurer votre connexion Internet sur Windows 10

Connexion via Wi-Fi

- Activer le Wi-Fi : cliquez sur l'icône réseau dans la barre des tâches. Si le Wi-Fi est désactivé, cliquez sur l'icône pour l'activer.
- Sélectionner un réseau : une liste des réseaux disponibles apparaît. Choisissez celui de votre domicile ou un réseau public.
- Entrer la clé de sécurité : si le réseau est sécurisé, il vous sera demandé de saisir la clé Wi-Fi (mot de passe). Faites attention à la respecter correctement, en respectant la casse.
- Se connecter : cliquez sur « Connecter ». La connexion s'établira en quelques secondes.

Connexion via Ethernet

- Brancher le câble Ethernet : reliez votre ordinateur à votre box ou routeur à l'aide d'un câble Ethernet.
- Vérifier la connexion : Windows détecte généralement automatiquement la connexion. Si ce n'est pas le cas, allez dans « Paramètres > Réseau et Internet > Ethernet » pour vérifier si la connexion est active.

Résolution des problèmes de connexion

- Redémarrer votre routeur/modem : parfois, la solution la plus simple est de débrancher puis rebrancher votre matériel réseau.
- Vérifier les paramètres IP : dans « Paramètres > Réseau et Internet > Statut », cliquez sur « Modifier les options de l'adaptateur », puis faites un clic droit sur votre connexion et choisissez « Propriétés » pour vérifier que DHCP est activé.
- Utiliser l'outil de dépannage : Windows propose un assistant intégré. Faites un clic droit sur l'icône réseau, sélectionnez « Résoudre les problèmes » et suivez les instructions.

Naviguer efficacement sur Internet avec Windows 10

Utiliser Microsoft Edge ou d'autres navigateurs

Windows 10 est livré avec Microsoft Edge, un navigateur moderne et sécurisé. Cependant, vous pouvez aussi installer d'autres navigateurs comme Chrome ou Firefox selon votre préférence.

Astuces pour une navigation fluide

- Mettre à jour votre navigateur : cela garantit la sécurité et la compatibilité.
- Gérer les favoris : utilisez la barre de favoris pour accéder rapidement à vos sites préférés.
- Utiliser des extensions : pour bloquer la publicité, gérer les mots de passe ou améliorer la

confidentialité.

Sécurité et confidentialité

- Mettez à jour Windows régulièrement pour bénéficier des dernières protections.
- Activez Windows Defender ou utilisez un antivirus tiers pour protéger votre ordinateur.
- Soyez vigilant face aux sites suspects ou aux emails de phishing.

Gérer et optimiser votre connexion Internet

Surveiller votre consommation de données

Si vous utilisez une connexion limitée (forfait mobile ou Internet à la maison avec un quota), vérifiez votre consommation via « Paramètres > Réseau et Internet > Usage des données ».

Optimiser la vitesse de navigation

- Fermez les onglets et applications inutiles : cela libère des ressources.
- Vérifiez la qualité de votre signal Wi-Fi : plus le signal est fort, meilleure sera la vitesse.
- Utilisez un répéteur Wi-Fi ou un câble Ethernet si votre signal est faible dans certaines zones.

Sécuriser votre réseau Wi-Fi

- Changer le mot de passe Wi-Fi régulièrement.
- Utiliser un chiffrement WPA2 ou WPA3 pour votre réseau.
- Désactiver le WPS si vous ne l'utilisez pas, pour éviter les intrusions.
