The Architecture of the Internet

The Internet's architecture, as detailed by Comer, is a layered ecosystem built on the OSI (Open Systems Interconnection) model and TCP/IP protocols. It encompasses a variety of hardware, software, and protocols working together to facilitate global communication.

1. TCP/IP Protocol Suite

The TCP/IP model, foundational to the Internet, consists of four layers:

- **Network Interface Layer:** Corresponds to physical and data link layers, handling hardware addressing and transmission.
- **Internet Layer:** Manages routing and addressing with IP protocols.
- **Transport Layer:** Ensures reliable data transfer via TCP or faster, connectionless communication via UDP.
