Every healthcare system faces limited resources—funds, personnel, equipment—and must make choices about their allocation. Recognizing scarcity is the first step toward efficient decision-making.

2. Opportunity Cost

The cost of any resource used is the value of the next best alternative foregone. For example, funding allocated to one program may limit resources available for another.

3. Cost-Effectiveness Analysis

This involves comparing the costs and health outcomes of different interventions to determine which provides the best value.

4. Equity and Efficiency

Balancing fairness (equity) with the optimal use of resources (efficiency) is a central challenge in health economics.

5. Externalities and Market Failures

Healthcare often exhibits market failures, such as information asymmetry and externalities, necessitating government intervention.
