- Flow rate (Q): $Q = -K \times A \times \frac{dh}{dl}$

Where:

- (K) = hydraulic conductivity
- (A) = cross-sectional area
- $(\frac{dh}{dl})$ = hydraulic gradient

Hendriks refined the application of Darcy's law in heterogeneous soils, accounting for variable permeability.

Water Balance Equation

The water balance is expressed as:

- Change in storage = Inflows - Outflows

Mathematically:

$$\left[\frac{\partial \theta}{\partial t} \right] = I - O$$

Where:

- (θ) = volumetric water content
- (I) = inflow (precipitation, recharge)
- (O) = outflow (evapotranspiration, runoff, percolation)

Hendriks integrated these principles into models that simulate temporal and spatial water movement.
