- A) To initialize weights randomly
- B) To introduce non-linearity into the model
- C) To optimize the learning rate
- D) To normalize the inputs

Answer: B) To introduce non-linearity into the model

Explanation: Activation functions are crucial in neural networks because they introduce non-linearity. Without them, the network would behave like a linear model, regardless of the number of layers.

Common activation functions include ReLU, sigmoid, and tanh, each enabling the network to learn complex patterns.
