The adolescence moniker is a more recent classification, emphasizing the fruit's specific ripeness stage during harvest.

Key historical points include:

- Origins: Believed to be a hybrid between the mandarin orange and the sweet orange, the clementine was first cultivated in the French monastery of Marnay in the late 1800s.
- Spread: Through trade and agricultural experimentation, clementines became popular across Europe, North Africa, and eventually North America.
- Naming: Named after Brother Clément, a French missionary credited with popularizing the fruit, though the term "adolescence" is used more recently to denote a specific ripening stage, emphasizing the fruit's youthful yet mature qualities.

Today, the adolescence clementine is cultivated primarily in regions with warm, Mediterranean climates such as Spain, California, Morocco, and parts of North Africa—places ideal for producing high-quality, flavorful fruit.
