- Tracks income and expenses

- Ensures compliance with tax laws
- Assists in budgeting and financial planning
- Supports strategic decision-making

Basic Principles of Accounting

To keep the process consistent, accountants follow fundamental principles:

Accrual Principle

Revenue and expenses are recorded when they occur, not when cash is exchanged.

Consistency Principle

Use the same accounting methods over time to ensure comparability.

Going Concern

Assumes the business will continue to operate unless there's evidence to the contrary.

Matching Principle

Expenses are matched to the revenue they help generate within the same period.

Conservatism

Accountants should choose methods that avoid overstating income or assets.

Key Components of Financial Statements

Financial statements are the main reports produced by accounting systems. They offer insights into the financial position and performance of a business.

Balance Sheet

Shows a snapshot of a company's assets, liabilities, and equity at a specific point in time.

- **Assets:** What the business owns (cash, inventory, property)
- **Liabilities:** What the business owes (loans, accounts payable)
- **Equity:** Owner's interest in the business

Income Statement

Also known as the profit and loss statement, it summarizes revenues and expenses over a period, showing profit or loss.

- **Revenue:** Income from sales or services
- **Expenses:** Costs incurred to generate revenue
- **Net Income:** Revenue minus expenses

Cash Flow Statement

Details the inflow and outflow of cash, highlighting how cash is generated and used within the business.

The Accounting Cycle

The accounting cycle is a series of steps that businesses follow to record and report financial information systematically.

- **Identify Transactions:** Recognize financial events affecting the business.
- **Record in Journals:** Log transactions using journal entries.
- **Post to Ledger:** Transfer journal entries to individual accounts.
- **Trial Balance:** Ensure debits equal credits to verify accuracy.
- **Adjusting Entries:** Make adjustments for accrued or deferred items.
- **Financial Statements:** Prepare balance sheet, income statement, and cash flow statement.
- **Closing Entries:** Reset temporary accounts for the next period.

Types of Accounts

Understanding different accounts helps in organizing and analyzing financial data.

Asset Accounts

Resources owned by the business (e.g., cash, inventory, equipment).

Liability Accounts

Obligations owed to outside parties (e.g., loans, accounts payable).

Equity Accounts

Owner's interest in the business, including retained earnings and capital contributions.

Revenue Accounts

Income generated from sales or services.

Expense Accounts

Costs incurred in running the business (e.g., rent, salaries).

Basic Accounting Methods

Two primary methods are used to keep books: cash basis and accrual basis.

Cash Basis

Records transactions when cash changes hands. Simpler but less accurate for long-term planning.

Accrual Basis

Records transactions when they are earned or incurred, regardless of cash flow. More comprehensive and compliant with accounting standards.

Common Accounting Tools and Software

Modern accounting relies heavily on technology. Some popular tools include:

- QuickBooks
- Xero
- Sage
- FreshBooks

These tools automate many tasks, improve accuracy, and generate reports quickly.

Understanding Debits and Credits

Debits and credits are the foundation of accounting entries.

Debits
