

# TIC TALK LIVING WITH TOURETTE SYNDROME A 9 YEAR O Document

**tic talk living with tourette syndrome a 9 year o:** An In-Depth Look at the Challenges, Experiences, and Support for Children with Tourette Syndrome

Living with Tourette Syndrome (TS) as a 9-year-old can be an intricate journey filled with unique challenges, moments of joy, and valuable lessons. For children at this age, understanding and managing tics—both motor and vocal—can significantly impact their daily lives, social interactions, and self-esteem. This article aims to provide comprehensive insights into what it means to live with TS as a young child, offering practical advice, coping strategies, and a hopeful outlook for children and their families.

## Understanding Tourette Syndrome in Children

### What Is Tourette Syndrome?

Tourette Syndrome is a neurological disorder characterized by repetitive, involuntary movements and sounds called tics. These tics are classified into two main types:

- Motor Tics: Involuntary movements such as blinking, shoulder shrugging, or facial grimacing.
- Vocal Tics: Involuntary sounds, including throat clearing, grunting, or words and phrases.

TS typically manifests in childhood, with symptoms often appearing between the ages of 5 and 7, and can fluctuate in severity over time.

### Common Signs and Symptoms in a 9-Year-Old

At age 9, children may experience:

- Frequent blinking, nose twitching, or facial grimacing.
- Sudden head jerks or shoulder shrugs.
- Vocalizations like throat clearing, sniffing, or repetitive words.
- Tics that are more noticeable during periods of stress or excitement and may diminish during calm or focused activities.

## Causes and Neurological Basis

While the exact cause of TS remains unknown, research suggests it involves abnormalities in certain brain regions, such as the basal ganglia, and neurotransmitters like dopamine. Genetics also play a significant role, with TS often running in families.

## Living with Tourette Syndrome: Challenges and Experiences

### Social and Emotional Challenges

Children with TS often face social difficulties, including:

- Bullying or teasing due to visible tics.
- Embarrassment or self-consciousness in social situations.
- Feelings of frustration or anger about their uncontrollable movements and sounds.

### Academic and School-Related Issues

Tics can interfere with concentration, learning, and participation in classroom activities. Some children may:

- Find it hard to sit still for long periods.
- Feel distracted by their tics or the reactions of peers.
- Require accommodations or support from teachers and school staff.

### Managing Tics and Daily Life

Children learn various strategies to cope with their tics, such as:

- Using relaxation techniques during stressful moments.
- Redirecting tics or substituting less noticeable behaviors.
- Taking breaks when tics become overwhelming.

### The Fluctuating Nature of Tics

Tics often wax and wane. Stress, fatigue, excitement, or illness can exacerbate symptoms, while calm and focused states may reduce their frequency. Understanding this variability helps children and parents develop patience and resilience.

## Supporting a 9-Year-Old Living with Tourette Syndrome

### Medical and Therapeutic Interventions

While there is no cure for TS, several treatments can help manage symptoms:

- Behavioral Therapy
  - Comprehensive Behavioral Intervention for Tics (CBIT): Focuses on awareness and habit reversal techniques.
- Medications
  - Prescribed in severe cases to reduce tic severity, with careful monitoring for side effects.
- Educational Support
  - Individualized Education Programs (IEPs) to accommodate learning needs.
- Counseling and Emotional Support
  - To address self-esteem issues and social challenges.

### Practical Strategies for Children and Parents

- Creating a Supportive Environment: Encourage understanding and patience among peers and teachers.
  - Educating Others: Inform classmates and staff about TS to foster empathy.
  - Establishing Routines: Consistent daily schedules can help reduce stress.
  - Encouraging Open Communication: Let children express their feelings and frustrations.
  - Promoting Self-Acceptance: Reinforce positive self-image and celebrate individual strengths.

## Tips for Children with TS

- Practice relaxation techniques like deep breathing or mindfulness.
- Engage in hobbies and activities that boost confidence.
- Find peer support groups or online communities for shared experiences.
- Use humor and positivity to cope with challenges.

## The Role of Family, School, and Community

### Family Support

Families are central to helping children navigate TS. Strategies include:

- Educating family members about TS.
- Attending medical appointments together.
- Offering emotional reassurance and patience.

### School Accommodations and Support

Schools can support children with TS by:

- Providing a quiet space for breaks.
- Allowing flexible seating arrangements.
- Implementing anti-bullying policies.
- Educating staff and students about TS.

### Community Resources

Local and national organizations offer valuable resources:

- Support groups for children and parents.
- Educational materials and workshops.
- Advocacy for inclusive policies.

## Living a Full Life with Tourette Syndrome

Many children with TS lead happy, successful lives. With proper support, understanding, and

treatment, children can develop resilience and thrive academically, socially, and personally.

### Inspiring Stories

Numerous individuals with TS have achieved notable accomplishments, demonstrating that TS does not define their potential.

### Encouraging a Positive Outlook

- Focus on strengths and talents.
- Celebrate achievements, big or small.
- Foster a growth mindset and encourage persistence.

### Conclusion

Living with Tourette Syndrome as a 9-year-old presents unique challenges but also offers opportunities for growth, self-discovery, and resilience. Awareness, education, and compassionate support from family, educators, and community are essential in helping children with TS navigate their world with confidence. By understanding their experiences and providing tailored strategies, we can ensure that children living with TS feel accepted, empowered, and capable of achieving their dreams.

### Tic Talk: Living with Tourette Syndrome at Age 9

#### Introduction

Living with Tourette Syndrome (TS) is a complex journey marked by unpredictable movements and sounds, known as tics, alongside social, emotional, and developmental challenges. For a 9-year-old navigating the world with TS, understanding the condition, managing its symptoms, and fostering resilience are critical components of daily life. This article offers an in-depth exploration of what it means for a young child to live with Tourette Syndrome, examining medical perspectives, psychological impacts, educational considerations, and personal stories that illuminate the lived experience of a 9-year-old with TS.

## Understanding Tourette Syndrome in Childhood

Tourette Syndrome is a neurological disorder characterized by repetitive, involuntary movements and sounds called tics. Typically manifesting in childhood, TS affects boys more often than girls, with onset usually between ages 5 and 7. At age 9, children are often in the midst of crucial social and cognitive development, making the management of TS particularly impactful.

## What Are Tics?

Tics are sudden, rapid, non-rhythmic movements or vocalizations. They are generally classified into two categories:

- Motor Tics: Involving body movements such as eye blinking, facial grimacing, shoulder shrugging, or head jerking.
- Vocal Tics: Involving sounds like throat clearing, grunting, sniffing, or repeated words and phrases.

Tics can vary in intensity, frequency, and type over time and may be influenced by stress, excitement, fatigue, or focus.

## Prevalence and Diagnosis

Approximately 1 in 100 children are diagnosed with TS. Diagnosis is primarily clinical, based on the presence of multiple motor and at least one vocal tic persisting for more than a year, with onset before age 18. Early diagnosis enables tailored management strategies and support systems.

## The Daily Experience of a 9-Year-Old with TS

Living with TS at this age can be both physically and emotionally demanding. Children may face challenges that influence their self-esteem, social interactions, and academic performance.

## Physical Manifestations and Management

Young children often experience a variety of tics that can be disruptive or embarrassing. For example:

- Repetitive eye blinking or facial grimacing.
- Sudden shoulder shrugs or head movements.
- Vocalizations such as clearing the throat or sniffing.

While some tics are mild, others can interfere with daily tasks or cause discomfort. Children learn to

develop coping mechanisms, sometimes consciously suppressing tics temporarily, which can lead to increased stress or fatigue.

## Psychosocial Aspects

Children with TS often grapple with social stigma and peer misunderstanding. Common experiences include:

- Being teased or misunderstood by classmates.
- Feeling isolated or different.
- Anxiety about tics becoming noticeable or disruptive.

Despite these challenges, many children develop resilience, especially when supported by understanding peers, family, and educators.

## Educational Environment

Classrooms present unique challenges:

- Tics may distract the child or classmates.
- Some children require accommodations, such as extra time for assignments or breaks.
- Awareness programs in schools help foster acceptance and reduce bullying.

Parents and teachers play vital roles in creating an inclusive environment that supports the child's learning and emotional well-being.

## Medical and Therapeutic Approaches

Managing TS in children involves a combination of medical, behavioral, and supportive strategies tailored to individual needs.

## Medication Options

Medications are considered when tics significantly interfere with daily functioning or cause distress. Common options include:

- Dopamine blockers: such as haloperidol or risperidone.
- Alpha-adrenergic agonists: like clonidine or guanfacine.

- Botulinum toxin injections for localized tics.

However, medication decisions weigh benefits against potential side effects, and many children manage well without pharmacological intervention.

## Behavioral and Cognitive Strategies

Behavioral therapies are often first-line treatments, emphasizing:

- Habit Reversal Training (HRT): Teaching awareness of tics and developing competing responses.
- Comprehensive Behavioral Intervention for Tics (CBIT): Combining HRT with relaxation and coping skills.

These approaches empower children to reduce tic frequency and manage urges more effectively.

## Support Systems and Education

- Psychological Support: Counseling can help address anxiety, social challenges, and self-esteem issues.
- Parent and Family Education: Understanding TS helps families provide support and advocate effectively.
- Peer Support Groups: Connecting with others facing similar challenges fosters acceptance and resilience.

## Personal Stories and Case Insights

While each child's experience with TS is unique, common themes emerge. Consider the story of Alex, a 9-year-old boy diagnosed with TS at age 6.

Alex's Journey:

- Initially, Alex was confused by his tics and worried about classmates' reactions.
- Through behavioral therapy, he learned to recognize the urge to tic and employ techniques to control or redirect it.
- His parents worked closely with his teachers to implement classroom accommodations, such as allowing movement breaks.
- Over time, Alex's confidence grew; he became an advocate for himself and others.

Stories like Alex's highlight the importance of early intervention, supportive environments, and empowering children to understand and manage their condition.

## Challenges and Future Outlook

Despite advances in understanding and managing TS, children face ongoing challenges:

- Tic Fluctuations: Tics often wax and wane, making management unpredictable.
- Comorbid Conditions: Many children also experience ADHD, OCD, or learning disabilities.
- Social Acceptance: Overcoming stigma remains a societal challenge.

However, with continued research, increased awareness, and comprehensive care, the outlook for children with TS is improving. Early diagnosis and intervention can significantly enhance quality of life, helping children develop resilience, self-awareness, and social skills.

## Conclusion

Living with Tourette Syndrome at age 9 involves navigating a complex landscape of neurological symptoms, social dynamics, and emotional development. While tics can pose challenges, they do not define the child's intelligence, personality, or potential. With appropriate medical care, behavioral strategies, supportive environments, and understanding communities, children with TS can thrive, develop confidence, and embrace their unique identities. Recognizing their experiences and fostering acceptance is essential in empowering these young individuals to lead full, joyful lives.

This article aims to provide a comprehensive understanding of the lived experience of a 9-year-old with Tourette Syndrome, emphasizing the importance of awareness, tailored treatment, and community support in fostering a positive outlook and quality of life.

**QuestionAnswer** What is Tic Talk and how does it relate to living with Tourette Syndrome? Tic Talk is a popular social media platform where individuals, including those with Tourette Syndrome,

share their experiences, challenges, and daily life stories, helping to increase awareness and understanding of the condition. How can a 9-year-old with Tourette Syndrome manage their tics? Managing tics in children often involves behavioral therapies like Habit Reversal Training, maintaining a routine, practicing relaxation techniques, and working closely with healthcare professionals for personalized strategies. Are there any common triggers that worsen tics in children with Tourette's? Yes, common triggers can include stress, anxiety, excitement, fatigue, or certain environmental factors. Identifying and minimizing these triggers can help reduce tic severity. What are some helpful ways for parents to support their child with Tourette Syndrome? Parents can support their child by educating themselves about Tourette's, fostering a supportive environment, encouraging open communication, and collaborating with healthcare providers for appropriate treatment and behavioral strategies. Can children with Tourette Syndrome participate in sports and activities? Absolutely! Most children with Tourette's can participate in sports and activities. Adaptations may be needed, and encouraging involvement helps build confidence and social skills. How does social media, like TikTok, help children with Tourette Syndrome connect and share their experiences? Social media platforms like TikTok provide a space for children with Tourette's to connect with others, share their stories, reduce stigma, and find community support, which can be empowering and validating. What are some misconceptions about Tourette Syndrome that kids and parents should be aware of? Common misconceptions include the idea that tics are intentional or that Tourette's is only about swearing. In reality, tics are involuntary movements or sounds, and many individuals manage their symptoms successfully. Is there hope for children with Tourette Syndrome to lead successful lives? Yes, many children with Tourette Syndrome grow up to lead successful, fulfilling lives with appropriate support, therapy, and understanding from family, teachers, and peers.

**Related keywords:** Tourette syndrome, childhood tics, neurodevelopmental disorder, involuntary movements, vocal tics, sensory processing, neurological condition, tic management, family support, living with Tourette

## Living And Non Living Things Multiple Choice

**living and non living things multiple choice** questions are a common way to assess understanding of the fundamental differences between what constitutes living organisms and inanimate objects. These questions are widely used in school examinations, quizzes, and educational activities to help students grasp essential biological concepts and develop observational skills. Recognizing the characteristics that distinguish living from non-living things is crucial for students studying biology, environmental science, and general science education. In this article, we will explore the differences between living and non-living things through multiple-choice questions, their importance in education, and tips on how to approach such questions effectively.

## Understanding Living and Non-Living Things

Before diving into multiple-choice questions, it's essential to understand the basic definitions and characteristics that differentiate living and non-living things.

### What Are Living Things?

Living things, also known as organisms, are entities that exhibit certain biological processes. They are capable of growth, reproduction, response to stimuli, metabolism, and adaptation over time. Examples include humans, animals, plants, fungi, and microorganisms.

Characteristics of living things:

- **Growth and Development:** Living things grow in size and develop features over time.
- **Reproduction:** They produce new individuals of the same species.
- **Response to Stimuli:** They react to environmental changes, such as light, sound, or touch.
- **Metabolism:** They carry out chemical reactions to produce energy.
- **Homeostasis:** They maintain a stable internal environment.
- **Adaptation:** They evolve over generations to better survive in their environment.

### What Are Non-Living Things?

Non-living things are objects or substances that do not possess the biological processes characteristic of living organisms. They do not grow, reproduce, respond to stimuli, or undergo metabolism.

Examples include:

- Rocks
- Water
- Air
- Furniture
- Buildings
- Plastic objects

Characteristics of non-living things:

- Do not grow or develop

- Do not reproduce
- Do not respond actively to stimuli
- Are not capable of metabolism
- Maintain a fixed composition

## Common Multiple Choice Questions on Living and Non-Living Things

Multiple choice questions (MCQs) are an effective way to test knowledge in a quick and efficient manner. Here are some typical MCQs that can help reinforce understanding.

### Sample Questions and Answers

**- Which of the following is a non-living thing?**

- a) Tree
- b) Dog
- c) Rock
- d) Fish

**Answer:** c) Rock

**- Which characteristic is common to all living things?**

- a) Responding to stimuli
- b) Having a backbone
- c) Being made of plastic
- d) Being found in water

**Answer:** a) Responding to stimuli

**- Which of these is NOT a characteristic of living organisms?**

- a) Growth
- b) Reproduction
- c) Movement
- d) Inability to respond to environment

**Answer:** d) Inability to respond to environment

**- Which of the following is an example of a living thing?**

- a) Air
- b) Mushroom
- c) Water
- d) Plastic bag

**Answer:** b) Mushroom

**- Which statement best describes non-living things?**

- a) They can reproduce
- b) They grow and develop
- c) They do not respond to stimuli
- d) They carry out life processes

**Answer:** c) They do not respond to stimuli

## How to Approach Multiple Choice Questions on Living and Non-Living Things

Approaching MCQs effectively requires understanding the concepts and applying logical reasoning. Here are some tips:

### 1. Read the Question Carefully

Pay close attention to what the question asks. Look for keywords such as "which," "all," "except," or "most."

### 2. Recall Key Characteristics

Think about the defining features of living and non-living things. Remember that characteristics like growth, reproduction, response, and metabolism are exclusive to living things.

### 3. Eliminate Incorrect Options

Narrow down choices by ruling out options that do not fit the criteria. For example, if an option clearly lacks the ability to reproduce or respond, it's likely non-living.

### 4. Be Wary of Tricky Questions

Some questions may contain options that seem similar. Carefully analyze each choice, and consider

real-world examples to guide your answer.

## 5. Use Examples to Clarify

Relate options to familiar objects or organisms. For instance, if an option is ?a plant,? remember that plants are living organisms.

## Importance of Differentiating Living and Non-Living Things in Education

Understanding the difference between living and non-living things is fundamental in science education for several reasons:

- **Foundation of Biological Science:** It helps students comprehend basic biological concepts and the classification of organisms.
- **Environmental Awareness:** Recognizing living and non-living components of ecosystems fosters environmental consciousness.
- **Scientific Observation:** It enhances skills in observation and critical thinking.
- **Preparation for Advanced Topics:** Concepts learned here form the basis for studying ecology, physiology, and evolution.

Incorporating multiple-choice questions into lessons encourages active participation, reinforces learning, and helps teachers assess students? understanding effectively.

## Conclusion

Living and non-living things multiple choice questions serve as an essential tool in education to reinforce understanding of fundamental biological concepts. By recognizing the key differences?such as growth, reproduction, response to stimuli, and metabolism?students can better classify objects and organisms they encounter daily. Preparing for such questions involves understanding characteristics, practicing sample questions, and applying logical reasoning. Whether in classroom quizzes, competitive exams, or self-assessment, mastering these concepts ensures a solid foundation in science education and fosters curiosity about the natural world.

Remember: Always analyze each option carefully, recall the main features of living and non-living things, and relate questions to real-world examples for best results.

Living and Non-Living Things Multiple Choice: An In-Depth Exploration

Understanding the differences between living and non-living things is fundamental in the study of

biology and environmental sciences. This knowledge helps us classify the myriad objects and organisms we encounter daily, fostering a deeper appreciation of the natural world. Multiple-choice questions (MCQs) are a common assessment tool used to evaluate comprehension of these concepts. In this article, we delve into the core characteristics that distinguish living from non-living things, explore typical MCQ formats, and provide insights on how to approach such questions effectively.

## The Significance of Differentiating Living and Non-Living Things

Before exploring the mechanics of multiple-choice questions, it's essential to grasp why distinguishing between living and non-living entities matters. This understanding forms the foundation for various scientific disciplines, including biology, ecology, medicine, and environmental science.

- **Biological Classification:** Organisms are categorized based on their characteristics, aiding in scientific naming and study.
- **Environmental Impact:** Recognizing which objects or substances are living or non-living influences conservation efforts and ecological management.
- **Daily Life Applications:** From understanding household objects to recognizing natural phenomena, this knowledge informs everyday decisions.

## Fundamental Characteristics of Living Things

Living things, also known as organisms, exhibit specific features that set them apart from non-living objects. Recognizing these features is crucial for answering MCQs accurately.

### - Growth and Development

Living organisms grow and develop over time, increasing in size and undergoing various structural changes. For example, a seed germinating into a plant exemplifies growth and development.

### - Reproduction

Living things have the ability to reproduce, creating new individuals of the same species. This can occur sexually (involving two parents) or asexually (single parent).

### - Response to Stimuli

Organisms respond to environmental stimuli such as light, temperature, or touch. For instance, plants bend towards sunlight, and animals react to danger.

- Metabolism

Living entities carry out metabolic processes, involving chemical reactions that sustain life, such as respiration and digestion.

- Homeostasis

Maintaining a stable internal environment, or homeostasis, is characteristic of living organisms. Humans regulate body temperature, for example.

- Cellular Structure

All living things are made up of one or more cells, which are the basic units of life.

- Adaptation to Environment

Over generations, living organisms adapt to their surroundings through evolutionary changes.

### Characteristics of Non-Living Things

Non-living objects do not possess the features listed above. They do not grow, reproduce, respond to stimuli in the biological sense, or undergo metabolic processes.

### Key Features of Non-Living Things:

- Lack of Cellular Structure: They are not made up of cells.
- No Growth or Development: They do not grow or change over time unless physically altered.
- No Reproduction or Metabolism: They do not reproduce or carry out metabolic reactions.
- Inability to Respond to Stimuli: They do not respond to environmental changes biologically.
- Inanimate Nature: Examples include rocks, water, air, and man-made objects like chairs and buildings.

### Common Multiple Choice Question Formats on Living and Non-Living Things

MCQs are designed to test knowledge, understanding, and application of concepts related to living and non-living things. Here are typical formats and how to approach them.

#### - Identification Questions

These ask students to identify whether an object or organism is living or non-living.

Example:

Which of the following is a living thing?

- a) Rock
- b) Tree
- c) Water
- d) Air

Correct Answer: b) Tree

Tip: Focus on the features like growth, reproduction, and cellular structure to distinguish living from non-living options.

#### - Statement-Based Questions

These present statements about characteristics, requiring the test-taker to judge their truthfulness.

Example:

Which of the following statements is true?

- a) A car can grow and reproduce.
- b) A fish responds to touch and can reproduce.
- c) A book responds to stimuli.
- d) A mountain can carry out respiration.

Correct Answer: b) A fish responds to touch and can reproduce.

Tip: Remember, only living things can perform biological functions like response and reproduction.

### - Application and Scenario Questions

These involve applying knowledge to real-life situations or hypothetical scenarios.

Example:

An organism is observed to respond to light, grow over time, and reproduce. Which category does it belong to?

- a) Non-living object
- b) Living organism
- c) Man-made object
- d) Non-living natural object

Correct Answer: b) Living organism

Tip: Use the key characteristics to analyze the scenario rather than relying solely on appearance.

### - True or False Questions

Quick assessments of understanding.

Example:

All non-living things are made up of cells. (True/False)

Answer: False

### Strategies for Answering Multiple Choice Questions Effectively

To excel in MCQs on living and non-living things, consider the following strategies:

- Read Each Question Carefully: Pay attention to keywords like "always," "never," or "reproduce."
- Eliminate Clearly Wrong Options: Narrow down choices to improve chances of selecting the correct answer.
- Recall Key Characteristics: Use your knowledge of the features that define living and non-living entities.
- Look for Clues in the Wording: Sometimes the phrasing hints at the correct answer.
- Practice Regularly: Familiarity with common question types boosts confidence and accuracy.

### Sample Multiple Choice Questions with Explanations

Here are some sample MCQs to test your understanding:

- Which of the following is NOT a characteristic of living things?

- a) Growth
- b) Response to stimuli
- c) Inability to move
- d) Reproduction

Answer: c) Inability to move

Explanation: While many living things can move, some, like plants, do not move freely. However, the key point is that movement is a common characteristic, and inability to move in itself is not a hallmark of non-living things.

- A rock is an example of a:

- a) Living thing
- b) Non-living thing
- c) Dead organism
- d) Reproducing organism

Answer: b) Non-living thing

Explanation: Rocks do not grow, reproduce, respond biologically, or metabolize.

- Which feature is shared by both living and non-living things?

- a) Respond to stimuli
- b) Made up of cells
- c) Can reproduce
- d) Can grow

Answer: a) Respond to stimuli

Explanation: Non-living things can respond to stimuli in a physical or chemical way (e.g., a mirror reflecting light). However, biological response is characteristic of living things.

### The Educational Importance of Understanding Living and Non-Living Things

Mastering the distinctions through MCQs and related exercises enhances scientific literacy. It allows students and enthusiasts to:

- Better understand ecosystems and biodiversity.
- Recognize natural phenomena versus man-made objects.
- Develop critical thinking skills by analyzing characteristics rather than superficial appearances.
- Prepare effectively for exams and assessments.

### Conclusion

Distinguishing between living and non-living things is more than an academic exercise; it is a window into understanding the natural world. Multiple-choice questions serve as an accessible means to test and reinforce this knowledge, emphasizing key characteristics such as growth, reproduction, response to stimuli, and cellular structure. By familiarizing oneself with these features and practicing various question formats, learners can confidently navigate the concepts that underpin biology and environmental science.

Remember, the core difference lies in the presence of life processes. Living things grow, reproduce, respond, and adapt?non-living things do not. Recognizing these fundamental traits is essential, whether you're answering quiz questions or simply marveling at the complexity of nature around

you.

QuestionAnswer Which of the following is a living thing? A plant Which characteristic is NOT typical of living things? They do not grow Which of these is an example of a non-living thing? A rock What do living things need to survive? Food, water, and air Which of the following is NOT a living thing? A chair Which characteristic helps distinguish living things from non-living things? Living things can grow and reproduce Which of the following is a non-living thing? A bicycle Which of these is a non-living object? A computer Living things can do which of the following? Carry out life processes like growth and movement Which of the following is a non-living thing that can be found in nature? A mountain

**Related keywords:** living things, non-living things, characteristics, plants, animals, objects, biotic factors, abiotic factors, classification, examples

**Read the full article online:** [LIVING AND NON LIVING THINGS MULTIPLE CHOICE](#)
