Sample Questions and Explanation Highlights

Example 1: Which type of transport does not require energy?

Answer: Diffusion, facilitated diffusion, osmosis

Explanation: These are passive processes driven by concentration gradients and do not require cellular energy.

Example 2: Why is the phospholipid bilayer considered selectively permeable?

Answer: Because it allows certain molecules (like small, nonpolar molecules) to pass through while blocking others.

Explanation: The bilayer's hydrophobic interior restricts passage of polar or charged molecules, requiring transport proteins for their movement.
