Understanding Menstruation and Its Significance

What Is Menstruation?

Menstruation, commonly known as a period, is the regular shedding of the uterine lining in women of reproductive age. It occurs as part of the menstrual cycle, which is regulated by hormonal changes involving estrogen and progesterone. This cycle prepares the body for pregnancy each month and typically lasts between 21 to 35 days.

The Menstrual Cycle: An Overview

The menstrual cycle comprises several phases:

- Menstrual Phase: Shedding of the uterine lining resulting in bleeding.
- Follicular Phase: Development of follicles in the ovaries, leading to ovulation.
- Ovulation: Release of an egg around the midpoint of the cycle.
- Luteal Phase: Preparation of the uterus for possible pregnancy; if fertilization does not occur, hormone levels drop, triggering menstruation.

When Do You Usually Start Your Period?

Typical Age Range for Menarche

Most girls begin menstruating between ages 9 and 16, with the average age around 12 to 13 years old. However, some may start earlier or later due to genetic, environmental, or health factors.
