Economics is the social science concerned with the production, distribution, and consumption of goods and services. It examines how individuals and societies choose to allocate limited resources to satisfy their unlimited wants.

The Scarcity and Choice Dilemma

- Scarcity: Resources such as land, labor, and capital are limited.
- Choice: Due to scarcity, choices must be made about how best to allocate resources.
- Opportunity Cost: The value of the next best alternative foregone when making a decision.

Supply and Demand Fundamentals

These are the pillars of market economies, influencing prices and quantities exchanged.

- Law of Demand: As the price of a good decreases, demand generally increases, and vice versa.
- Law of Supply: As the price of a good increases, the quantity supplied tends to increase.
- Equilibrium Price: The price at which the quantity demanded equals the quantity supplied.

Market Equilibrium and Efficiency

Market equilibrium ensures optimal allocation of resources, leading to economic efficiency where no individual can be made better off without making someone else worse off.

Production and Costs

Firms seek to produce goods efficiently to maximize profits.

- Production Functions: Relationship between inputs and outputs.

- Monopoly: Single firm dominates the market.

- Monopolistic Competition: Many firms offer differentiated products.

Macroeconomics: The Broader Economic Environment

Macroeconomics looks at the economy as a whole, analyzing aggregate indicators and government policies.

Understanding how economies expand over time through increases in productivity and capital accumulation.

Inflation and Deflation

The rise or fall in general price levels impacts purchasing power and economic stability.
